

Gulf of Mexico Harmful Algal Bloom Bulletin

Region: Texas

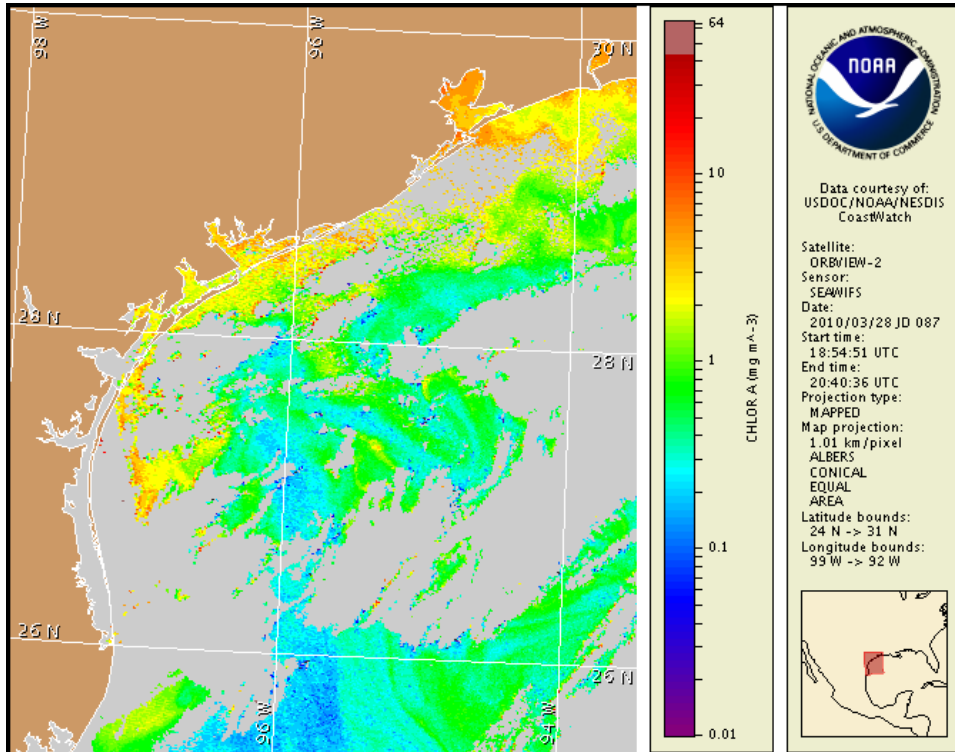

30 March 2010

NOAA Ocean Service

NOAA Satellites and Information Service

NOAA National Weather Service

Last bulletin: March 23, 2010

Satellite chlorophyll image with possible HAB areas shown by red polygon(s). Cell concentration sampling data from March 20 to 29 shown as red (high), orange (medium), yellow (low b), brown (low a), blue (very low b), purple (very low a), pink (present), and green (not present). For a list of cell count data providers and a key to the cell concentration categories, please see the HABFS bulletin guide:

http://tidesandcurrents.noaa.gov/hab/habfs_bulletin_guide.pdf

Please note the following restrictions on all SeaWiFS imagery derived from CoastWatch.

1. Data are restricted to civil marine applications only; i.e. federal, state, and local government use/distribution is permitted.
2. Image products may be published in newspapers. Any other publishing arrangements must receive GeoEye approval via the CoastWatch Program.

Conditions Report

There have been no reports of harmful algal blooms in coastal Texas. No impacts are expected.

Analysis

Recent imagery has been marginal. Nothing significant to report. -Wynne

Wind speed and direction are averaged over 12 hours from buoy measurements. Length of line indicates speed; angle indicates direction. Red indicates that the wind direction favors upwelling near the coast. Values to the left of the dotted vertical line are measured values; values to the right are forecasts. Wind observation and forecast data provided by NOAA's National Weather Service (NWS).

Wind Analysis

Today S-SE wind at 10-20 knots. Wednesday SE wind at 15-20 knots Thursday SE wind at 15-20 knots. Friday SE wind at 20 knots.
